

RECRUITMENT ASSISTANCE REQUIRED
Survey of Driving after a Whiplash Injury
(10-15 mins to complete)

Driving is one of the most difficult functional tasks for people with chronic whiplash associated disorders (WAD) but little is documented about the nature of difficulties. Researchers at UQ are developing a questionnaire for the assessment of driving difficulties.

Can you assist us to recruit patients with WAD to volunteer to complete the survey

- Neck pain from a whiplash injury 3 months and 3 years ago
- 18-65 years old and current car drivers
- did not lose consciousness at the time of the whiplash injury
- have no additional medical conditions affecting driving

Access to survey:

1. Patients can complete the survey directly on line. Please provide them with the web address: <https://www.surveymonkey.com/s/P2MQ59Y>
2. We can send you survey packs to give to patients to complete and return to us (email us your mailing address and how many survey packs you require)

Ethical Clearance has been obtained for the project from the UQ Medical Ethics Committee

We thank you in anticipation of your assistance
